

Water Meter, Connection & Deposit Info

Please be advised of the following:

Water Meters:

Contractor Water Meter: Upon completion of a utility application a temporary contractor meter will be made available to you during the construction of the home. **Please allow 24 hour notice to install water meter.**

The temporary contractor meter is the responsibility of the builder to insure that damage does not occur to either the meter or the meter barrel during construction. Before termination of the account, and completion of the certificate of occupancy, the meter & meter barrel will be inspected. If damage occurs, the builder will be held responsible for the costs.

The account will be billed the regular monthly billing rate for water. The utility bill due date is the 25th of each month.

A residential meter will be installed after a Certificate of Occupancy is issued for the home.

Service Connection:

The utility department will connect the sewer and dispatch fee to the monthly billing of a completed home that has received a certificate of occupancy.

The owner of the home will need to contact the office to complete the utility application, pay the required deposit, and request a garbage can.

Utility Deposit:

A \$200.00 utility deposit is collected along with the building permit and impact fees.

Please contact the city office when the home has been completed and the certificate of occupancy has been issued in order to close the account. The deposit will be applied to any outstanding utility balance then refunded to the builder.

The deposit paid by an owner builder will remain on the account and be eligible to be applied as a credit to the account after a year of on time payments.
